

## GAMES INSTALLATION ON SAMSUNG X700

**Last Updated On : October 07, 2008**

Here is the complete detailed guide for games/softwares installation on **Samsung X700** and other samsung mobiles like **D500**, **D600**, **D900** etc. I have made this guide for Windows XP.

For games installation on Samsung X700, you need two softwares on your PC :

[Softick PPP](#) and [Samsung Java Uploader](#).

Just click on above links to download these two softwares on your PC.

This is the registration Key for Softick PPP 2.21 software :

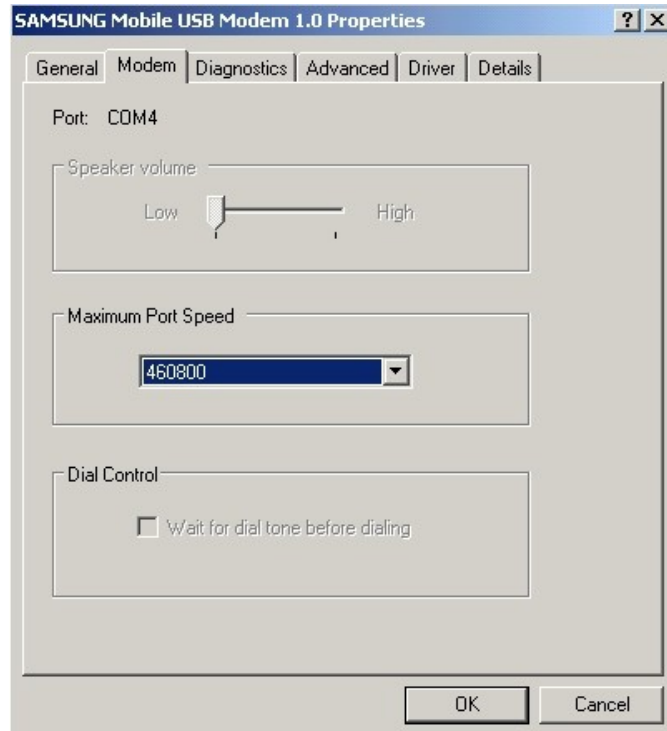

**380A-017K-2EJF-2SEF**

But before proceeding, connect your mobile with PC through USB cable and start **Samsung PC Studio** software. You will see this screen on your computer:

After checking connectivity of your mobile with **Samsung PC Studio** software, **CLOSE** this software (I mean **EXIT**). Make sure that your mobile is connected to your PC through USB cable and check the COM port by going to classic start menu options: **Start Menu/ Settings/ Control Panel/ System/ Hardware/ Device Manager/ Modems/ Samsung Mobile USB Modem 1.0/ Modem**.

Or Windows XP style options : **Start Menu/ Control Panel/ Performance and Maintenance/ System/ Hardware/ Device Manager/ Modems/ Samsung Mobile USB Modem/ Modem**. Now, note down the **COM port**. ( I have Port : COM 4 But your's may be different ) .

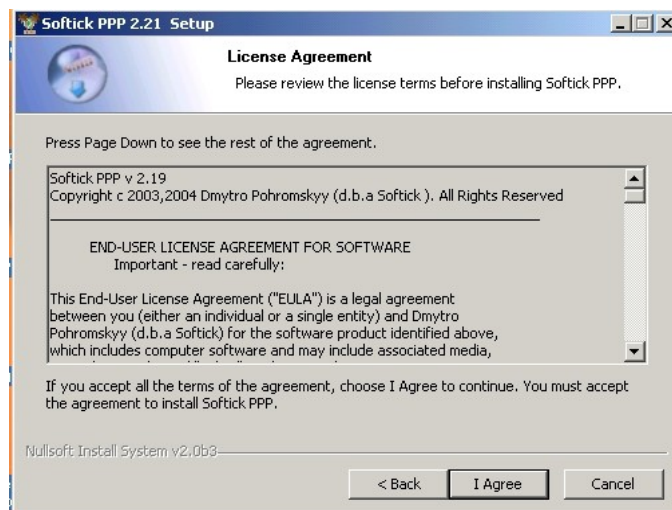

Now install **Softick PPP** software on your PC . You will see this screen :

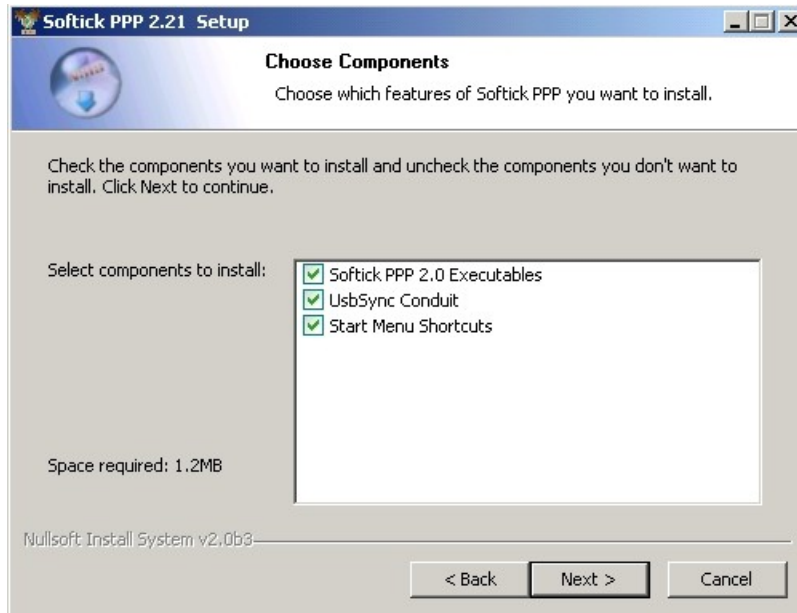

Press **OK** button.

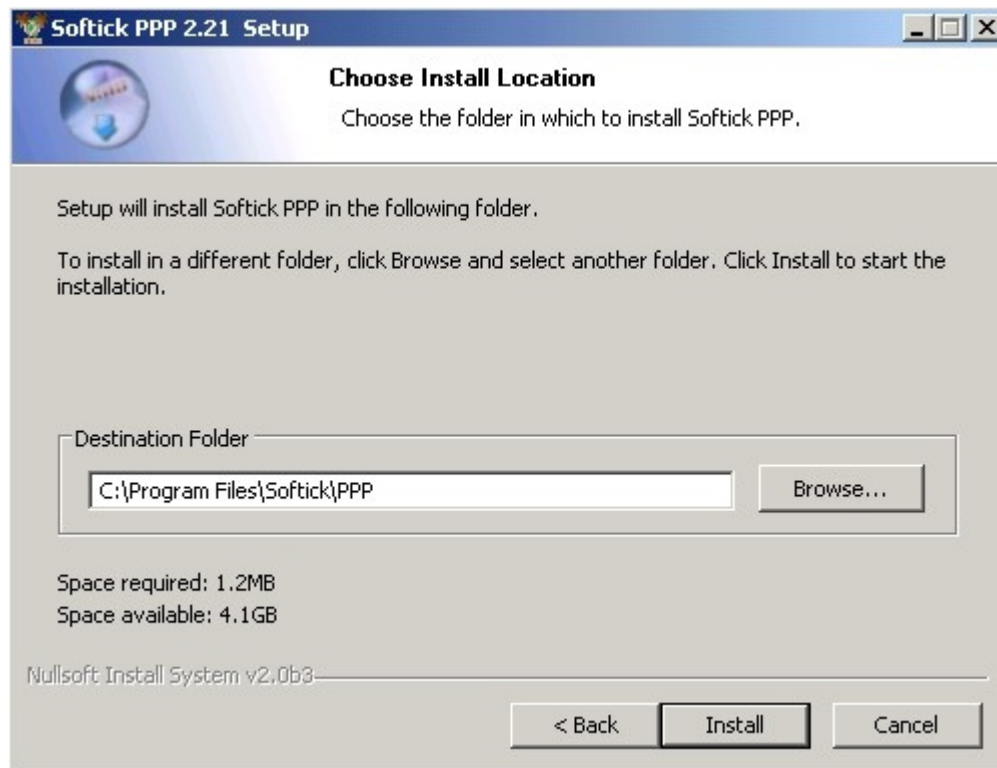

Click **Next** button.

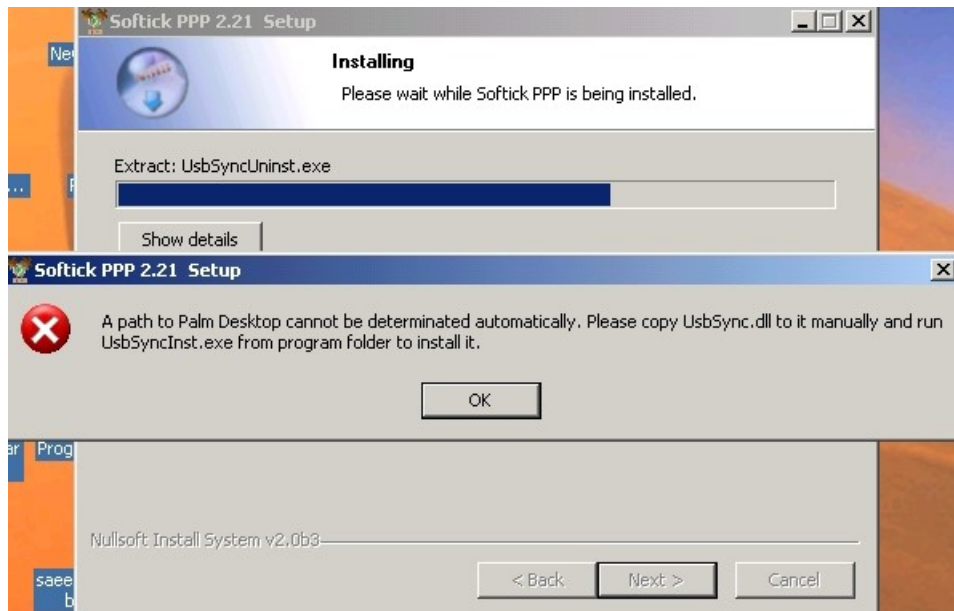

Press **"I Agree"** button.

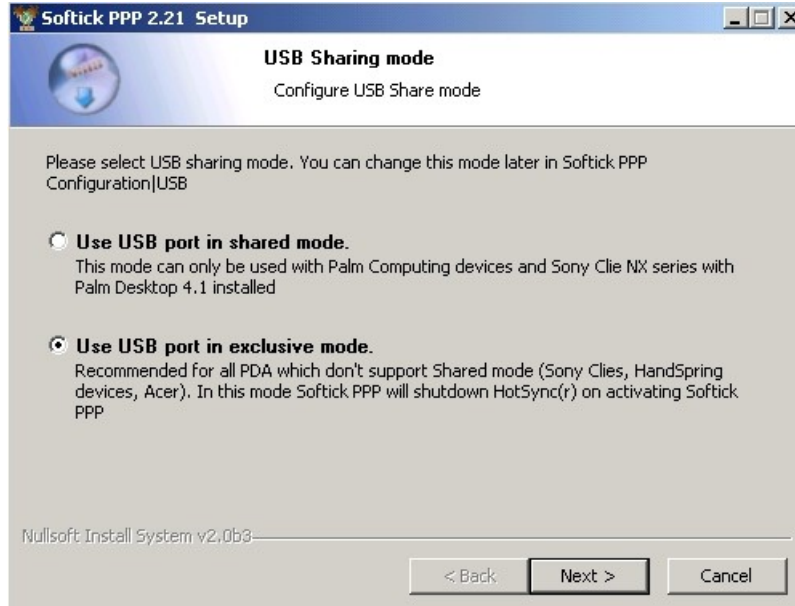

Press **Next** button.

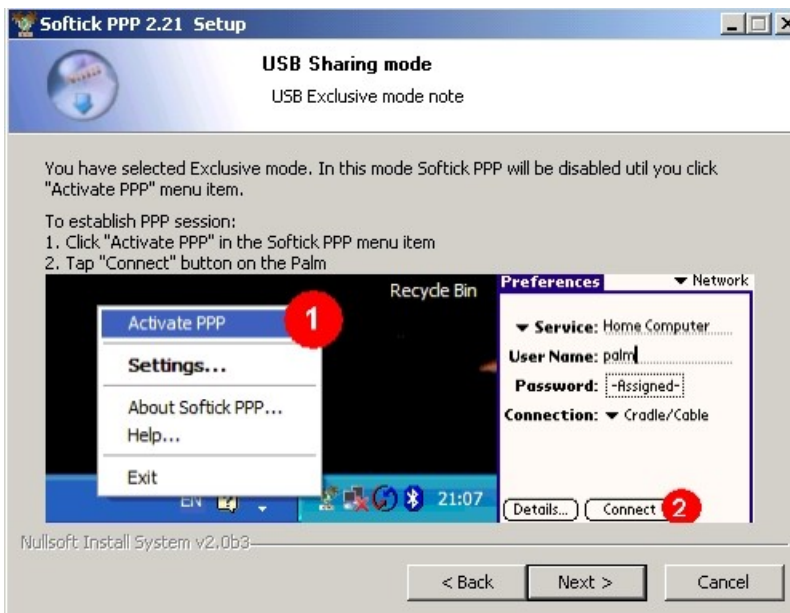

Click to **Install**. You will see this message :

Press **OK** button.

Select "**Use USB port in exclusive mode**" and press **Next** button.

Again press **Next** button.

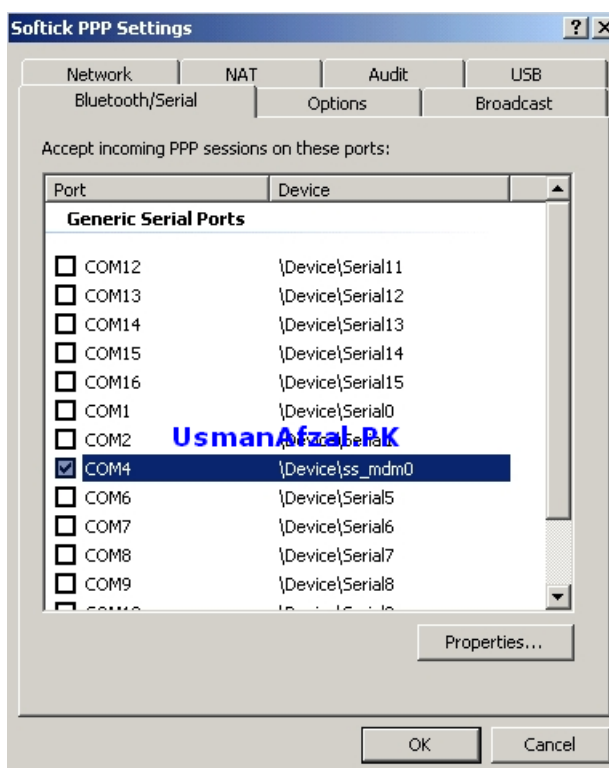

Press **Finish** button. This will complete the installation.

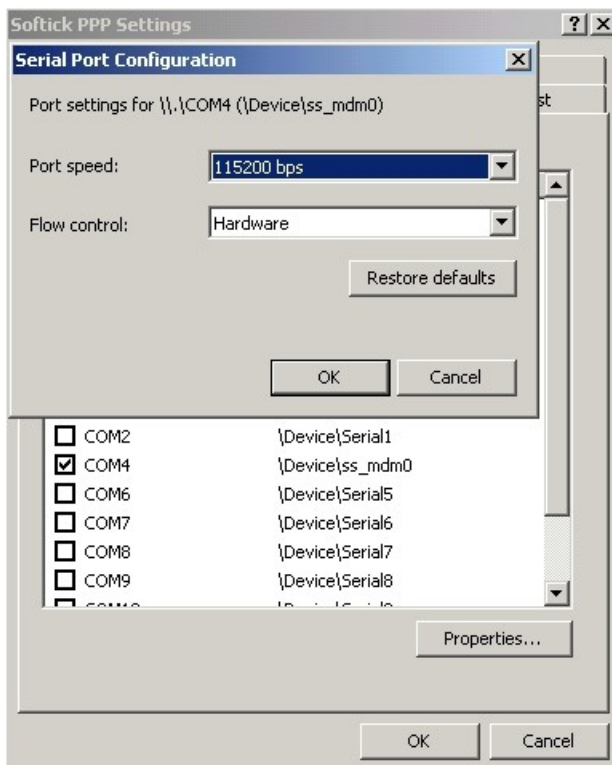

Now, in **SYSTEM TRAY**, right click on its icon and go to **"Settings"**.

Now, select **Bluetooth/ Serial** and then select **COM : 4 port ( /Device/ss\_mdm0 )** and put check on it's checkbox.

Now, check it's properties:

Press **OK** then again press **OK**. Right click on it's icon and Click to **"Activate PPP"** option.

It will show this message :

Click **"Cancel"** to ignore this error message. Now, place mouse pointer on Softick PPP 's icon on system tray. You can see this message:

It means that you have successfully connected X700 with Softick PPP software.

If Softick PPP software shows **“NOT connected”** message then check that you are able to connect X700 with Samsung PC Studio software . If yes, then it means that you are using wrong COM port setting for Softick PPP software.

When you see “1 device connected message” then proceed to next step:

**On X700, Go to Menu/ Applications/ Java world/ Settings**

**On D600, Go to Menu/ Applications/ Java world/ Options/ Network Settings**

and enter this:

**APN: internet**  
**Login ID : (Keep Empty)**  
**Password : (Keep Empty)**  
**Proxy : Disable**  
and press "Save".

Now, on your mobile in standby mode, enter this code : **#\*536963#** ( to enable java download )

You will see **“Serial Java .... Others disable”** . Press **“C”** button on your mobile .

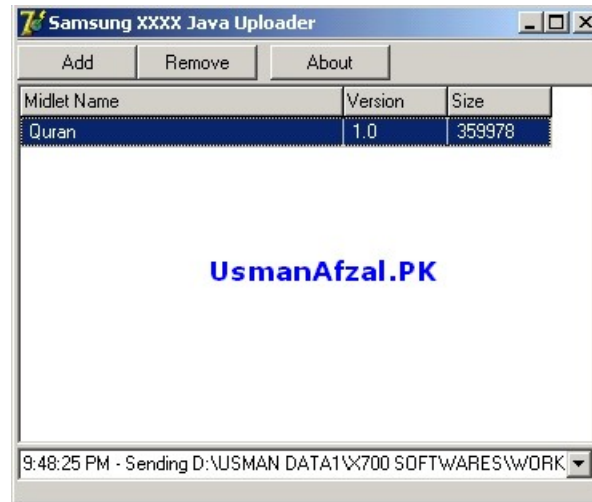

Start **Samsung Java Uploader** software and add the desired **JAD** file. Keep both **JAR & JAD** files in the same folder. If you have only JAR file then you can make new JAD file through JAR file using JAD MAKER software.

[Download JAD Maker software from here](#)

Enter this code on your X700 : **#\*5737425#** and you will see **“JAVA Serial”** screen on X700. Select **“PPP UP”** and then **USB**. Select **“Serial download”** and downloading will be started.

On PC, you can see “Sending xyz.jad” while on X700, you can see the **progress bar** proceeding!

**There is no jar file size limit when install games by above method.**

*To load multiple games just add another JAD file in the Uploader software and enter **#\*5737425#** on your X700 in standby mode and select Serial Download. Please **DO NOT SELECT** “PPP UP” otherwise your mobile will restart and you will need to start the whole procedure from the beginning .*

After installation, **CLEAR the APN field in X700 java settings** otherwise you cannot access internet from midlet like Opera Mini and after installation, enter this code : **#\*536961#** to remove any wap internet access problem.

If you have any problem regarding this whole procedure. You can ask:

**Muhammad Usman Afzal**

[usmanafzal101@gmail.com](mailto:usmanafzal101@gmail.com)

### **Trouble Shooting :**

If your mobile restarts / hangs , then try this:

1. Disconnect **USB** cable from mobile and restart it.
2. Right click on **Softick PPP icon** on system tray and shut down it.
3. Exit the **Java Uploader** software. Again open it and select **JAD** file.
4. Connect X700 to **PC** through **USB** cable.
5. Right click on **Softick PPP** software icon and **Activate** it. You can see **"1 device connected"** message.
6. Enter **#\*5737425#** and select **"PPP UP"** then **"USB"** then **"Serial download"**.
7. Java download will **start** immediately.

If my mobile does not start downloading for any reason then i uses the above process and i gets success every time. Make sure that you have entered (APN : internet) in java world settings. There is no need to re-enter java enables code (**#\*536963#**) every time. For incompatible softwares, java installation does not start and just java world opens.

**<http://usmanafzal.pk>**

X700 has NO jar file size limit when installing through usb cable. Keep both jar/jad files in same folder. Also check the available free memory of java world. If you have deleted any java software from java world BEFORE installation , then RESTART every thing then proceed above process! Thanks!
