

OPERA MINI hifi v 1.2.0.4509 built 20060303 modif. v 1.22 built 20060720

Network settings (HTTP proxy)

Opera Mini Server: 80.232.117.10:80

*******VERY IMPORTANT*******

After installation, Opera Mini will start automatically and you will see this message:

"Phone Setup: Push the joystick or center navigation key to test your network connection now."

Please **don't try this** now and simply select **"Close"** option. This will open main screen of Opera Mini. Now goto **"Menu/ Tools/ Settings/ Network."** Scroll down the screen and select **"Opera Mini Server: Other"**. Press **"OK"** center navigation key to select it. Now, enter this address into the textbox:

80.232.117.10:80

HINT for Samsung E200 users: To switch from Alphabets to Numbers or Numbers to Alphabets in the textbox, press asterisk () key once.*

Press "Save" and close the software.

The network settings (server IP address) has been saved forever but ofcourse, you can manually change it!. Restart your mobile and then open the software again.

Now you will see again **"Phone Setup"** screen. Press **center key** and very soon, you will see **"G"** icon on upper right of the screen. Wait till you see this message:

"You have a working network connection."

Select **"Done"** option then select **"Close"** option. Now type any URL under **"Surf the web"** address box. First time, you will see **"EULA"** page of Opera Mini site. Put **check** on checkbox before this line: **"I have read and accept the end user license agreement"**

Press **"Continue"** button. Now you can use Opera Mini.
